

CHANGE FOR 3.26

FORMAL PUBLIC IDENTIFIER (FPI)

-//USA-DOD//DTD MIL-STD-2361 TM Assembly REV 3.26 20100609//EN

1. Per request by AMCOM and LOGSA to allow random list in Warning, Caution, and notes. The model additionally aligned to the proposed "D" revision.
2. Per request by AMCOM and LOGSA to add attributes "wpid" and "taskid" to the element "maintfunc" to allow users to hover and view the Work Package title and/or Task title to perform the maintenance.
3. Per request by AMCOM and LOGSA to add validations and verifications track metadata. This data can be extrapolated to view the percent completion for a validation or verification for a project or provide progress report on status of data development. The new elements are "qualityassurance" to the elements "tracking" and "change.history"; and elements "unverified", "validation", and "verification" to the element "qualityassurance".
4. Per request by AMCOM and LOGSA to add attributes "idref" and "assocfig" to element "key" in control and indicators tables. Provides links from key to the graphics callout.
5. Per request by AMCOM and LOGSA to add the attribute "applicable" to the elements "sysnomen", "malfunc", "xref", and "action". This improves functionality for visibility of data to identify specific weapon systems or countries to the applicable data. This was used to extrapolate data using applicable for weapon system configurations and FMS countries.
6. Per request by AMCOM and LOGSA the attributes "branchto", and "branchfrom" are changed from #REQUIRED to #IMPLIED in elements "origin", "branchref", "endblock", and "testblock". The linking to the next branch is performed in the element "answer".
